

Blackout: Game Improvements

CGV Group Project (COMS3006A) · Meeting notes, agreed changes for the beta · 7 October 2026

DEADLINE: Friday, 9 October 2026 · all improvements below are due by then

Who owns what (due Friday)

Area	Owner
Level 1	Nontokoza
Level 2	Kgothatso
Intro / storyline	Oratile
Sound (beta)	Rea
Kai and Handler 3D models	Junior

Intro and storyline

Owner: Oratile

- Rewrite the intro/storyline so it fits the jungle setting. Oratile has full creative freedom, as long as it stays creative.
- The intro plays **once only**. If the player is caught in Level 1 (or restarts), it must not play again.

Level 1 improvements

Owner: Nontokoza

- Double-check that **every** obstacle actually distracts or slows Kai.
- When Kai hits an obstacle such as a tree, play a visible **trip/stumble animation**.
- Add a **life/health bar** that drains each time Kai hits an obstacle. More hits mean less life.
- *Bonus*: place **life-saver packs** along the route that refill some health.
- Replace the current collectibles with **real-looking coins**, if possible.

Level 2 improvements

Owner: Kgothatso

- A gravel road shouldn't have so much traffic. Replace most cars with **jungle obstacles** (trees, branches, animals), keeping only a few cars here and there.
- Add an **animated scene between Level 1 and Level 2** showing Kai driving out of the jungle onto the road where Level 2 starts, so the two levels feel connected.

Game consistency

Owner: Nontokoza (matching Level 2)

- For testing: Level 2 shows a **Continue** button after being caught, which resumes from where the player lost. Level 1 must do the same.

3D models

Owner: Junior

- Find suitable 3D models for **Kai** and the **Handler**.

Note for the sound engineer

For: Rea

- **Be creative, but consistent**. Every sound should feel like it belongs to the same jungle world, with similar style, quality and volume across both levels and the intro.
- Give the jungle a living **ambient bed** (birds, insects, wind through leaves) that shifts to a road/engine atmosphere in Level 2. The new transition scene is a good place to blend the two.
- Short, readable **feedback sounds** for gameplay events: trip/stumble, health loss, life-saver pickup, coin collect, getting caught, and winning a level.
- Match sounds to the new visuals (coins should sound like coins, animals like animals) and keep music and effects balanced so effects are always audible.
